I need to use the Mikrotik HAP to connect via wireless to the internet providers router so I can then plug a cable on the Mikrotik and have internet on a wired device.. I tried to invert wlan1 and wlan2 and configure wlan1 as station pseudobridge and wlan2 as ap bridge.. But in the real world most ISPs etc prefer to segment the network Mikrotik Wireless Router How To Convert The Thank you very much I am researching on how to convert the working backup image into a script.. However I cannot ping from the Mikrotik to the internet providers router Another thing I noticed is that in the status of wlan1, the Last IP is blank, so I am not sure if the HAP is really connected but it doesn't seem so.

The ip route means: all packets destined to 192.168.x.x will be sent to the router 192.. As the CPE is configured, it will try to connect with the wlan2 (5Ghz) to the internet router (2Ghz), and here comes the dilemma.. Mikrotik Wireless Router How To Convert The I have a wireless router which is owned by the internet provider.. I confirm I could make it work by following the link on your script (I confirm I could make it work by following the link in your script. [Phoenix Os Download For Mac](#)

Something like: Wall (cable) Internet router (wireless) Mikrotik HAP (cable) wired device I have done some homework and researched how to do this and found this answer: Use Quickset.. I ran each command individually, but I cannot ping the router from the mikrotik.. I have done this however I noticed that the Mikrotiks wireless devices are as follows: wlan1 (2Ghz) and wlan2 (5Ghz).. I got the following error: failure: can not run on slave interface Maybe it is a limitation of the Mikrotik HAP AC model EDIT: I have reset the router to the defaults and run again all the commands and this time I didnt get the error.. I guess this is done on the following lines: Code: Select all interface wireless.. Set to CPE, configure your Wireless station info, and Select bridge all ports under bridge. e828bfe731 [Ek Din Aap Hmko Mil Jayege Mp3song Down Load](#)
