One of the best RTS games. More complicated than a few other RTS' like AoE or Company of Heroes but once you get resource management down, you're good. Still has an active multiplayer scene if you use FAF (forged alliance forever) third party client. Has competitions, rankings, mods ect.. A decent entry in the RTS genre. Worthwhile for a low price, so long as you are not expecting much from graphics or innovation. It seems like progress from Total Annihilation, but it's tougher for me to tell from this perspective.

It's not very fast paced save a couple timed/pressure missions, and would fit well for a casual player.. What can i say about this game. Its overwhelming as there is no unit limit. Meaning that you can overwhelm the enemy forces, but they can do the same, often you are constantly under attack. So you will need fortified defenses, and a lot if you want to build up large enough forces to move to the next stage. Missions can and will be larger than normal, you will be overwhelm as you defeat a threat, a new threat will make a new appearance after after the old is defeated. So i suggest that before you make any big push, have enough units and defenses ready for new arrivals as the mission map expands further, revealing new goals.. Game has known sound issues that stop working and require uncertain steps such as bios sound disable+enable. Developers will not fix it. Game is being sold with major problem.

I recommend googling for "supcom sound problems" and you will get a good idea.

It's a good game, but I do not recommend giving money for a broken product.. I've had Issues since getting this game on day one. It constantly crashes and freezes all the time whenever I launch it, making it practically unplayable. I've looked online for solutions to the issues but I have had no success with it. Will not be recommending to other people to play.
